PROFESSIONAL SUMMARY

Full-stack developer with 2+ years of experience building a production microservices platform end-to-end — from RBAC database design and circuit-breaker-protected backend integrations through a React 19 SPA with 21-language. I think in systems: when I built the impersonation feature, I designed the MSSQL session model, cross-service validation API, dual-token middleware, React context with cross-tab sync, live countdown UI, and Cypress E2E tests. One feature, every layer, production-ready.

EXPERIENCE

Software Developer — Skillssoft Corp, Hyderabad, India **Jul 2024 – Present**

Architecture & System Design

- Architected a 4-service microservices platform (3 Node.js/Restify backends — Profile, Events, Integrations — plus a React 19 SPA)
- Designed a dual-token impersonation system spanning every layer: MSSQL session model with 15-minute expiry, cross-service validation API, dual-token middleware in all three backends, React context with cross-tab sync, live countdown timer with RTL Unicode bidi isolation, and Cypress E2E tests

Backend Engineering

- Built 50+ REST API endpoints across 3 Restify services with cursor-based pagination, offset pagination, stored procedure integration, Swagger/OpenAPI 3.0, and 40+ standardized domain-specific error codes
- Designed a full RBAC system with 9 Sequelize models, immutable system-role protections, many-to-many permission junction tables, and audit trail history — with frontend sidebar rendering based on granular permissions
- Implemented Azure AD token-based database authentication (DefaultAzureCredential, Sequelize beforeConnect hooks, 3-retry acquisition, connection pooling) and circuit breaker resilience (3 independent Opossum instances with p-retry exponential backoff and jitter)
- Engineered the LinkedIn certificate pipeline end-to-end: OAuth 2.0 flow with CSRF state → PDF-to-PNG conversion → LinkedIn media upload → React sharing UI; built user provisioning: D365 validation → Microsoft Graph Entra ID creation → email via Azure Communication Services

Frontend Engineering

- Built a React 19 SPA with 25+ routes, 55+ components, and Vite 6 + SWC for 20-30x faster builds; designed 4 nested context providers for auth, impersonation (cross-tab sync, AbortController), contact validation (race condition prevention), and GDPR consent state
- Engineered a centralized Axios interceptor that maps API routes to OAuth scopes, acquires tokens per-request with MSAL acquireTokenSilent(), and handles 401/403 with forced logout and custom event dispatching
- Implemented 21-language internationalization (i18next, RTL support, Canvas measureText() for dynamic layouts), GDPR consent management (Osano CMP, Google Consent Mode v2, conditional GTM/GA4/Clarity loading), and a custom Tailwind theme with 60+ CSS variable tokens

Testing & Quality

- Authored 50+ test files — unit, integration, security, performance (sub-200ms thresholds), E2E (Cypress), and visual regression; built centralized error handling: 40+ backend error definitions + i18n-aware frontend error pipeline with toast notifications

SKILLS

Languages: JavaScript, TypeScript, Python, SQL, Java, HTML5, CSS3

Frontend: React 19, Next.js, Vite 6, SWC, Tailwind CSS, Context API, Axios, React Router v7, i18next

Backend: Node.js, Restify, Express.js, Flask, REST APIs, Microservices, Swagger/OpenAPI 3.0

Databases: Microsoft SQL Server, SQLite, Sequelize ORM, SQLAlchemy, Database Views, Stored Procedures, Connection Pooling

Auth & Security: Azure AD B2C, MSAL, JWT, JWKS, OAuth 2.0, RBAC, CSRF, Helmet, OTP, Impersonation

Cloud & DevOps: Microsoft Azure, Vercel, Azure Monitor, Azure Communication Services

Integrations: Microsoft Graph API, LinkedIn API, Zoom SDK, Dynamics 365, Azure Communication Services

Testing: Jest, Cypress, React Testing Library, E2E Testing, Security Testing, Performance Testing, Visual Regression, ESLint

Observability: Winston, Structured Logging, SHA-256 Audit Trails, Azure Monitor (DCE/DCR)

PROJECTS

- **AI Chatbot** (irfan-ai-chatbot.vercel.app) — Full-stack app unifying 9 AI providers (OpenAI, Claude, Gemini, Grok, DeepSeek) behind a single Express API with React frontend and zero server-side credential storage [React, Vite, Node.js, Express, OpenAI SDK, Anthropic SDK]
- **3D Animated Portfolio** (irfanuddin.is-a.dev/) — Personal portfolio exploring interactive 3D scenes and glassmorphism UI with Next.js, Three.js, and GSAP.

- **UI Buddy — Multi-Viewport Preview** (view-sync.vercel.app) — Synchronized multi-device responsive QA tool with cross-iframe postMessage communication and Vercel Edge Functions proxy *[React, TypeScript, Vite, Vercel Edge Functions]*
- **idea — Smart Notes** (irfan-idea.vercel.app) — Full-stack note-taking app with TF-IDF intelligent search, cross-device sync, offline-first architecture, and Docker deployment *[React, Express, SQLite, TF-IDF, Docker]*
- **Missing Person Finder** (huggingface.co/spaces/irfanuddin/missing-person-finder) — AI-powered facial recognition system matching photos against a registered database with confidence scoring *[Python, Flask, face_recognition, dlib, SQLAlchemy]*

EDUCATION

Bachelor of Technology in Information Technology — VJIT College of Engineering **Apr 2021 – Apr 2024**

CERTIFICATIONS

Full-Stack Engineer — Skillsoft | Microsoft Azure Essentials — Microsoft | GitHub Copilot — GitHub | Database Design & Development — Oracle Learning | Programming Essential in Python — Cisco | Cybersecurity, Privacy & Data Protection — Skillsoft
