PROFESSIONAL SUMMARY

Full-stack developer with 2+ years building enterprise learning platforms across frontend, backend, databases, and cloud infrastructure. Owns identity and access (Entra ID, RBAC, impersonation), configurable admin workflows, and integrations across Microsoft Graph, Zoom, Skillable, LinkedIn, and Microsoft Learn, collaborating daily with development team plus dedicated database and infrastructure teams.

SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL, Java, HTML5, CSS3
- **Frontend:** React 19, React Router, Vite, React Query, Context API, Tailwind CSS, Axios, lazy loading, Suspense, accessibility
- **Backend:** Node.js, Restify, Express.js, REST API design, middleware composition, Swagger/OpenAPI, service-to-service communication
- **Databases:** PostgreSQL, Sequelize ORM, dbmate migrations, schema design, transactions, indexes, views, legacy SQL Server (mssql/tedious)
- **Identity and Security:** Microsoft Entra ID, MSAL, JWT, JWKS, OAuth 2.0, OpenID Connect, RBAC, impersonation, CSRF, Helmet, rate limiting
- **Integrations:** Microsoft Graph, Zoom, Skillable, LinkedIn, Microsoft Learn, Azure Communication Services, Azure Key Vault, Azure API Management
- **Cloud, DevOps and Reliability:** Docker, Azure Container Apps, Azure Monitor, GitHub Actions, Helm, Opossum circuit breakers, p-retry, structured Winston logging
- **Testing:** Jest, Supertest, React Testing Library, Cypress, k6 load testing
- **System Design:** Data Structures and Algorithms (DSA), High-Level Design (HLD), Low-Level Design (LLD)

EXPERIENCE

Software Developer - Skillsoft Corp, Hyderabad, India

Jul 2024 - Present

- Architected a full-stack learning platform: a React 19 frontend, Node.js/Restify microservices, a dedicated data-synchronization service, a country-specific attendance-signing service, and a centralized PostgreSQL database, collaborating with a 4-5 person developer team, a dedicated database team, and an infrastructure team
- Automated configurable resource management for the entire learner base by building an admin engine (scoped assignments, precedence rules, override actions, availability and country/vendor policies) that lets staff assign meeting links, exam links, and materials per event, replacing a fully manual email process with a validated, previewable flow
- Designed a dual-token/impersonation system so admins can securely view a learner's exact experience and resolve issues earlier, with Entra ID token acquisition, cross-service validation, and React context state kept in sync across tabs
- Delivered backend APIs for user management, registration, password reset, Entra provisioning, role and permission administration, subscriptions, events, enrollments, certificates, consent management, and integration resources across Restify services
- Designed a full RBAC system with Sequelize models, immutable system-role protections, and many-to-many permission mapping, driving permission-aware admin surfaces and frontend rendering for learners, admins, and other roles
- Built PostgreSQL schemas and Sequelize models with transactions, indexes, views, audit records, and 60+ versioned dbmate migrations, while maintaining legacy SQL Server connectivity for existing systems
- Automated data-synchronization workflows with scheduled delta and full-load jobs, change-tracking watermarks, country-specific sources, retry sweeps, error/run logging, and asynchronous catalog enrichment from Microsoft Learn and Skillable
- Coordinated integrations with Microsoft Graph, Zoom, Skillable, LinkedIn, Microsoft Learn, and Azure Communication Services, including an end-to-end LinkedIn certificate-sharing pipeline letting learners who complete a course and pass their exam download and share a verified certificate
- Built an attendance-signing workflow with email/OTP authentication, QR-code session exchange, trainer attestations, encrypted signature storage, audit history, and bulk PDF/Excel import and export
- Built the React application with React Query caching and prefetching, lazy-loaded routes, Suspense boundaries, accessible modals, clear loading and error states, Tailwind layouts, and localized interfaces supporting 20+ locales
- Applied resilience and security controls including Entra JWT/JWKS validation, CSRF, Helmet, rate limiting, Opossum circuit breakers, p-retry backoff, and Promise.allSettled() failure isolation, backed by automated tests in Jest, Supertest, React Testing Library, Cypress, and k6

PROJECTS

AI Chatbot (irfan-ai-chatbot.vercel.app): unified 9 AI providers behind a single Express API with a React frontend and zero server-side credential storage

3D Animated Portfolio (irfanuddin.is-a.dev): personal site built with Next.js, Three.js, and GSAP featuring interactive 3D scenes

UI Buddy (Multi-Viewport Preview) (view-sync.vercel.app): synchronized multi-device responsive QA tool using cross-iframe messaging and Vercel Edge Functions

Idea (Smart Notes) (irfan-idea.vercel.app): full-stack note-taking app with TF-IDF search, offline-first sync, and Docker deployment

Missing Person Finder (huggingface.co/spaces/irfanuddin/missing-person-finder): AI-powered facial recognition system matching photos against a database with confidence scoring

EDUCATION

Bachelor of Technology in Information Technology - VJIT College of Engineering (Apr 2021 - Apr 2024)

CERTIFICATIONS

Full-Stack Engineer (Skillsoft) - Microsoft Azure Essentials (Microsoft) - GitHub Copilot (GitHub) - Database Design and Development (Oracle Learning) - Programming Essentials in Python (Cisco) - Cybersecurity, Privacy and Data Protection (Skillsoft) - Java and Python (IIT Bombay) - JavaScript and DSA (Skillsoft)
